

NT 5.5/300 PI

BALFOR conveyor belts are the strongest and heaviest on the market. Built to last and to minimise maintenance and spare parts. Thanks to the modularity of the PVC frame and belt, you have the possibility of varying their length and repairing them with little expense in the event of damage to the PVC belt. The paddles are made of metal to maximise durability. Balfor conveyor belts are by far the strongest on the market. The modular construction makes the frame resistant to any stress, the metal paddles totally eliminate wear and tear on the belt itself, and the modular belt gives the possibility of changing the damaged element only when necessary. The possibility of packing on a pallet guarantees absolutely low shipping costs.
