

BF 150 C

The **BF 150** is a machine capable of chopping green wood branches up to 15 cm in diameter. The branches advance by gravity and by being pulled in by the knives themselves. The BF 150 chipper works with a transverse rotor with a disc system with 2 knives. It is the ideal machine for chopping branches, prunings and logs, even medium-sized or large ones. The ejection outlet can be rotated through 270° and is adjustable thanks to the practical handles on the outlet. The hopper is foldable for transport and has dimensions of 76cm x 50cm. The BF 150 is constructed entirely of high-quality steel to ensure maximum durability and resistance to stress.
